

Days Aluminium Ball Walking Frame

General Details

Load Capacity (supplier stated) 125 kg

Height Overall 870 mm - 920 mm

Width Overall 640 mm (at base)

Width Internal 350 mm (internal width at top)

Height adjustment mechanism

Spring-loaded push button. Depress and hold down the spring-loaded button whilst sliding the extension leg up or down to the desired set of holes. The extension leg height should be determined by the users own height to ensure the most effective and safe position. Make sure the spring-loaded button is fully extended through the desired hole before putting weight on the item.

Folding Mechanism

Spring-loaded push button: depress and hold down the push button whilst folding in the sides of the frame. When unfolding ensure the buttons lock into place. Pull cord: pull upwards on the wooden ball to fold the front and back legs together.
